LETTER 12/30-B "Searle Bearing"
Jjb28.bmp

Pg. 01

Kim, this is so you will know about simple pyromagnetic devices.

Prof. Searle discovered his amazing bearing at least 60 years ago.

It uses an internal Neodymium core with a Nylon 66 onion shell around it. At the rim is an iron shell with a titanium outer shell.

The outer iron shell is de-magnetized on the front and magnetized on the back side as it rolls from thermal changes.
