LETTER 6/02/04 "To the Future Boldly We Must Go"

Pg. 01

Sir lets do this one step at a time.

I am "NOT" out to protect my inventions as many researchers are on the web.

There is a Troy Reed an hours drive away. He first cam to our electronics and high voltage meetings and then no one could get to see him. I asked many times and "HIS PEOPLE" would not even allow me to talk with him. My friend did see his work place once that was it...

I am not like Mr. Reed. I want my research published!

I want "YOU" to benefit from it. Naturally I would like some credit for these devices, if what I have been saying to people for over 30 years turns out to be true.

There is a lot of fraud on the internet! These people are after "MONEY"!!!!

I have written letters to Eric Kriegs "SKEPTIC" sight for years. He documents free energy fraud on the internet.

When I attended Southwestern University at Georgetown (near Austin) I had a ministry friend whose father invested money in the water pump "JEREMIAH 33:3". Over \$800,000 dollars was raised for an Alan Burke. The pump was found to have a "SECRET ELECTRICAL SOURCE".

If you understand me on this. There is a lot of fraud on the internet. It is a cess pool.

Eric is one of the watch dogs. I am very pleased he has researched these frauds and protected people from being deceived.

I personally am only interested in exploring wind power.

I studied Nuclear Engineering at T A&M in the early 80's.I also went to University of Houston, Rice, Lamar University, Houston Community College, Houston Baptist University to name a few.

So I love Texas. We have a ranch close to Houston. At one time we ran an oil business out of Houston.

Let me state, I began to fear Nuclear Power. There was just too much being swept under the rug!

Millions of Curies of highly radioactive waste was being released into the environment. This was in part from weapons development. They had used a "BLANKET" Defense secret policy to escape "ANY" prosecution for contaminating Americans all over the country.

Thousands have died from cancer as a result of all this weapons development. There are also thousands of pounds of high level radioactive waste being stockpiled in this country from Nuclear power stations.

I am a patriotic American. My father flew in B-24 bombers in the pacific (hence his love of ultralights).

I do not "BLAME" the government for weapons development. I just feel that Nuclear power is "UN-SAFE".

WE WILL BE STORING DANGEROUS NUCLEAR WASTE FOR ANOTHER 30,000 YEARS!

That is a terrible legacy to leave our future generations.

We are obtaining only a "FEW YEARS" of power from these radioactive materials and then storing them for Thousands of years!

That is too high a price to pay!

Yes Nuclear Fusion will eventually solve the Nuclear Power production problem. It will still Neutron activate reactor vessels that will have to be buried.

Coal plants are destroying our atmosphere, Acid rain, radioactive particles, you name it. Coal burning is a dirty business.

So what about solar energy and wind?

We need to do better. I was able to ask Ralph Nader when I was at HBU about solar cells. He stated they would be cheaper by 1995. I even got to speak with Dr. Carl Sagan at T A&M about radio telescopes.

Things are looking up for the human race.

That brings us to "MY" research into an advanced form of wind power. I have only one purpose in this. I want to assist in a better future for our children.

The wind power designs I have worked on are worth Billions of dollars.

One day a vast energy development program will come from them.

I believe the information is all ready in the hands of several governments.

I have "NO" idea if there is a conspiracy to keep these machines under wraps.

Look, I design new machines every day.

It's just what I do. I have had a natural talent for wind energy since I grew up in the 60's.

I have designed thousands of machines. In all of these machines it was this "LAST" class of wind energy generators that focused my attention.

These wind energy generators use "CONFINED PRESSURE CHAMBERS".

All other wind power devices use the "EXTERNAL FLOW" of the wind generator to force a blade or bucket to spin.

Sir, let me be frank about this.

It is "FOOLISH" and against all of the laws of thermodynamics to "RUN" an exhaust turbine off of its own "INPUT COMPRESSOR".

That is a "MOTOR" turning a "GENERATOR" that then powers the motor!!!

Pure physical nonsense!

There is friction and heat loss. This energy loss known as entropy can not be recovered from the environment.

So we "CAN NOT" build a Repulsine that uses it compressor to run its own exhaust turbine.

This is where we have to be very careful.

You simply will not have all of the energy in the compressor delivered to the exhaust turbine.

There is only one way around this.

WE MUST BRING IN THERMAL ENERGY FROM THE ENVIROMENT!

This heat is "NO DIFFERENT" from combusting fuel inside a gas turbine.

We are "NOT" doing anything new. We are just doing it better.

We are building a wind generator that uses the "EXTERNAL HEAT" found in all wind when it is compressed against a large metal plate.

In order to transfer this heat, the inside of our wind generator "MUST" be colder than the external wind flow.

It will take several letters and hundreds of diagrams to explain this.

It is a new field of wind energy research as revolutionary as the first airplane!

I will send you another letter explaining this in great detail. THANK YOU

END
