LETTER 6/09 "RE: Question"

Pg. 01

The primary reason "HAMMEL" (they never return my e-mails) used magnets attached to his cone shaped plates was to generate "HEAT"!!!!

The magnets also keep the Hammel plates from bumping into each other at high speeds (repulsion effect).

The "COLD" air that loads at the center of the Hammel cone vortex generator gets "STUCK" between the plates and the magnets.

The "COLD AIR" then "EXPANDS" and vibrates the Hammel plates.

This hot air driven vibration is in part do to the "MAGNETS" attached to his cone discs. As the magnets bump close to each other they induce electric current and this produces heat!!!

I have built these magnetic plates going back 20 years! I never caused matter to break down.

If you want to get "POWER" from your Repulsine, you simply "MAGNETIZE" your turbine drive shaft.

The wavy disc plates will then charge from the well known "HOMO-POLAR DYNAMOE" effect as they cut the magnetized axle lines of magnetic flux.

This will charge your Repulsine by sending a current from the axle to the rim.

I DO NOT RECOMEND IT !!!

If we use up the Repulsine rotation generating electricity.

It will interfere with its power cycle by generating a short to the rim when it is supposed to cooling.

I am not saying the magnets have no value. I am only saying that "SCHUABERGER DID NOT NEED THEM ON HIS FIRST REPULSINES".

It was only later that the "FUHRER ORDER" came down to perfect the electric bell homo-polar dynamo.

Sir, they also represent a "TERRIBLE" balance problem. They tend to fly off at high speeds!

I have bolted mine on with steel bolts, magnets are brittle and tend to break.

A final point, when a permanent magnet is "HEATED" it de-magnetizes over time and becomes worthless.

If you must do this, use an electromagnet.

As far as matter breaking down.

I would not want anyone using a device that can smash atoms!

I know all about nuclear accelerators.

THE FIRST REPULSINE MUST BE SAFE, OR THE PUBLIC WILL REJECT IT.

Schauberger believed matter break down possible, so I will not dispute him.

For now lets stick to conventional thermo-dynamics and use "NO" magnetic field on our test Repulsine's.

We are not building a "RADIATION SOURCE".

There was some man on the internet that started a rumor to discredit the Repulsine's that no one would build it.

He claimed it could generate 9 MEV X-RAYS.

OOPS...That was me.

Do you understand Sir, if we apply a "MAGNETIC FIELD" to the Repulsine? We will get possible X-RAY production.

THAT MY FRIEND IS EXACTLY WHAT THE SUPPRESSION GROUPS WANT.THEY WANT THE REPULSINE TO BE DECLARED A RADIATION HAZARD!!!

It will then make it easy for them to "OUTLAW" construction of Repulsine's in America.

For that reason alone, I believe we should "STEER AWAY" from magnetizing the wavy disc compressor plates at this time.

END
