**Pg. 01**

Kim there is also a "**ROTATING BAND DESIGN**" that I will send you later.

The triangle has great strength and can vector itself by simply controlling its exhaust ports.

Using this method you can easily see how a UFO can make 90 degree turns.

You are simply shutting off exhaust on one side of the triangular hull.

This design has been seen the world over.

The bottoms of UFO have intricate bends to allow the hull to resonate against the magnetic flange valve.

The simplicity of this triangular design cannot be ignored!
